regular expressions. In Ruby, you would want to use this functionality, for example, with `string.match`

```
^A\d+$ =~ s # => false ^A\d+$ =~ s # => "18"
```

The above example will attempt to return the match for "18" as you look for the beginning of your string. A: When you compare a regex to a string to see if it matches, it returns true or false. It will generally do so by looking at what the regex matches to the string (i.e. the match), not what it does to the string. If there was
