DevKinsta enables WordPress website creation, customization, and easy management, all through a powerful and extensive set of utilities designed for accessibility and flexible website management, on any device. About the DevKinsta desktop client application, the service, cloud hosting, and managing different websites First of all, it is

---

imperative to make the distinction between the Kinsta online platform and service and the same developer's DevKinsta application. The online service is specially designed to accommodate and facilitate website migration. The multi-website, online platform offers WordPress hosting, easy and assisted website migration to Kinsta's platform, data backups, Google Cloud Platform integration, and more. The

---

online application, DevKinsta, is a tool that enables website creation, editing, and customization locally, on your machine. This is an incredibly powerful program that is suitable for website designers, backend developers who need to test, debug, or reconfigure different implementations and structures, and testers who have to double-check certain elements and processes. As a result of choosing DevKinsta for

---

building/styling a website, you get increased flexibility, ease of use (you can work on your code from anywhere), and faster implementation (changes can be made, tested, and release a lot easier and faster). Getting started with DevKinsta, requirements, and functioning mechanisms The tool is an extensive instrument. Therefore, you need a modern device with enough space and computational power. Why? Because

---

DevKinsta will install Docker on your machine. Your PC must be capable to run simultaneous processes, seamlessly.

DevKinsta allows creating, in a containerized manner, one or more websites. You can easily update your components and dependencies, thanks to Docker's flexibility. After finalizing the installation process and the initial setup, you must open the newly installed tool and check DevKinsta's

---

available options. The app allows creating WordPress websites from scratch, editing existing ones, or importing (from Kinsta) your website(s)'s resources. DevKinsta

What's New In DevKinsta?

[+] [-]Q: C# struct - unable to  
pass struct as a method

parameter In C#, I am trying to  
pass a struct as a method

parameter like this: struct

```
MyStruct { public int X {get;  
set;} public int Y {get; set;} }
```

```
static void Main(string[] args) {
```

---

```
MyStruct s = new MyStruct();  
s.X = 6; s.Y = 6; MyMethod(s);  
} static void  
MyMethod(MyStruct  
structInstance) { int x; int y; x =  
structInstance.X; y =  
structInstance.Y; } So, I want to  
be able to use the struct passed  
as a parameter in the method  
MyMethod, but when I try to  
compile I get an error in  
MyMethod that says: 'MyStruct'  
does not contain a definition for  
'X' I also tried a different way to
```

---

pass the struct like this: static void Main(string[] args) { MyStruct s = new MyStruct(); s.X = 6; s.Y = 6; MyMethod(ref s); } static void MyMethod(ref MyStruct structInstance) { int x; int y; x = structInstance.X; y = structInstance.Y; } And then I get this error in MyMethod: 'MyStruct' does not contain a constructor that takes 0 arguments Any idea why I'm unable to pass a struct as a method parameter in this way?

---

A: In C# (and most other languages), structs are value types, which means they are copied when you pass them by value, but not when you pass them by reference. As a result, when you write static void Main(string[] args) { MyStruct s = new MyStruct(); s.X = 6; s.Y = 6; MyMethod(ref s); } this is how the call stack looks:

Allocate memory for the MyStruct instance  
Call new  
MyMethod to call the actual

---

method, passing the address of the newly created MyStruct instance as argument Free that memory Call Main, passing the new instance At this point, you are not passing the instance reference, but a copy. To pass it by reference, you can either pass a pointer to the instance:

static
