the latest updates: FlexMarket Summary 2 Video Text summary Learn more about FlexMarket FlexMarket Description This video will teach you how to create and use a FlexMarket for your business, with an emphasis on the software. The FlexMarket works on the Adobe AIR technology, which is the next-generation client side software that allows your applications to run in the Adobe AIR runtime environment. When you create a FlexMarket, you can create shopping areas for the specific categories that you want to be included in your application, and create a user authentication method that will allow only the users that are intended to see the contents of the application. You will also need to create a server side, where you will be able to send and receive responses to and from the users and the sales and inventory data. This can be done using a Flash application or with a Java application that communicates using a JSON data format. FlexMarket Basics You will use Flash and JSON to send and receive data to and from your FlexMarket application You can create a FlexMarket application with a customer/supplier model, an E-Commerce model, or an interactive information model You can create a FlexMarket application that can be accessed from any computer or device, including from a mobile phone Flash interfaces allow a more dynamic application, with full animation and visual effects JSON is the most popular data format that allows different devices to easily communicate with your application The FlexMarket application is
