QuickFolders is a reliable Mozilla add-on that can be used with Thunderbird and SeaMonkey to help you easily organize your folders. The tool allows

---

you to turn your folders into tabs and easily modify their location, hide or filter them. It relies on drag-and-drop to move folders or emails with no hassle. Simple to use tools and colorful tabs

QuickFolders can help you manage the folders

in your Mozilla email clients, by changing their location, their priority or their contents. Moreover, the tool allows you to colorize the tabs so that you can easily recognize them. The tool allows you to enliven the email client program with

colorful schemes, which you can pick from the available palette.

Another significant feature that

QuickFolders offers is the powerful email filtering tool, which can organize the messages by specified criteria and automatically send them

---

to certain folders. For example, if you subscribed to a website, the newsletters you receive can automatically be sorted into a separate folder. Additional functions for email organizing QuickFolders enables you to download all the

---

emails from the selected folder, via the IMAP server, as well as to clean the location from spam messages.

The tool can also optimize the email client memory-wise, by compressing the selected folders.

Moreover, you can

---

generate subfolders, search for messages or view a directory's properties. The tool also allows you to replace the icon assigned to each folder with a picture of your choice. In this case, ICO files are supported, but so are other image files,
