Summary of the book The first comprehensive study on embedded systems from a practical and. . engineering can be combined to develop a fully functioning embedded system.. This book outlines what such an embedded system would look like and how it is First-year student at the highly regarded Indian Institute of Engineering Science and.. engineer and manager at Amtel-India in Bangalore.The present invention is a variant of the invention described in commonly assigned patent application Ser. No. 365,519 filed May 9, 1973, for "An Inertial Navigation System Having Static and Dynamic Accuracy and Dynamic Stability Compensation." This application for the variant was filed on even date herewith. The present invention is a variant of a navigation system wherein the dynamic errors are compensated through the use of inertial sensors and signal processing in a manner so as to permit navigation while the vehicle is at rest. A method of augmenting the inertial sensor data set is disclosed which permits improved accuracy over the accuracy obtained with a single sensor, and which also permits compensation of higher-order errors in the sensor data. Inertial navigation, in which the location and orientation of an object are determined by measuring the orientation and the acceleration of the
