This isn't a new or novel innovation. Most games capture simple 2D player data with a static camera and use it to track player movement. The majority of games from Sanzaru, including FIFA 17, 19 and 20, used a 2D player representation to capture data such as where players go and how fast they move. FIFA 23 was an early pioneer of analyzing 3D player data, using a mesh of cameras to track player movement and movement physics. FIFA 20 was the first game to put this idea to the test: you could stand inside a player and take control of their jumping and skill animations. And now, as a result of all this improvement, FIFA 22 is the first in the series to really tap into the most vital, muscle-memory driven component of the sport of football: the ball. [Video embedded above] In the above video, EA sports director of gameplay design Miguel Caron shows what happens when you turn on "HyperMotion" in FIFA 22. "This is the future of FIFA," says Caron. "And people will love it."

What exactly is "HyperMotion" and why is it so great? The idea is that "HyperMotion" will feel smoother than normal gameplay. FIFA 18 introduced a physics model, called "Impact Awareness," that reacted to player contact. The result was that if you took a player down while using a tackle, he'd slide through your legs and tumble to the turf. If you delivered a powerful header, it would set off a chain reaction, sending the ball spinning up into the air to where it would bounce. Similarly, after a tackle by a defender, the ball would drop. It would be seen as if your player is immediately in contact with the ground. The problem with Impact Awareness was that the physics was triggered every time a player made contact, even if the contact made little or no impact on the play. The "Impact Processing" improvements made in FIFA 21, explains Caron, were based on almost a decade of data and play. "We now have a better understanding of players and how they move," he says.

EA Sports boss Peter Moore said during an interview that the game was appealing because of its abundance of features and because there were no microtransactions. FIFA Classic includes all the gameplay, stadiums and players of FIFA 21 (mode 1-10); making this compilation of the three major PES series games very popular. The game comes with 14 exclusive players, including three international superstars such as Lionel Messi, Cristiano Ronaldo and Wayne Rooney. In addition to the 11 EA games the game had exclusive players like Camila, Rafael Márquez and John Terry. Although the classic

In May 2007, EA announced that the game would not be released for the PC and PlayStation 2, but was planned for the Xbox 360 and PlayStation 3, with a possible release date for the summer 2007. During an interview in November 2007, EA Sports boss Peter Moore said the company had no plans of updating FIFA Classic due to its high popularity. The game also received critical acclaim. Sequel In 2011, a sequel to the game was announced under the name FIFA 11. The game was released on March 22, 2011 in North America and March 24, 2011 in Europe. The game was made available on Xbox 360, PlayStation 3, and PC. The game included 13 player-signings and two supercoaches.
